**‘PermaFLOW™ – Never Clog Drain’ partners with Medline Industries**

HOUSTON, TEXAS – Nov 8, 2009 – PF WaterWorks, the GREEN Drain management company, is proud to announce that it has enhanced its distribution capabilities into the healthcare industry through partnership with Medline Industries, Inc. a leading provider of medical and surgical products to the healthcare industry.

PermaFLOW™ Drain is engineered to prevent drain clogs and offers a GREEN alternative. It safely ends the need for hazardous drain-clearing chemicals and the associated personal safety and environmental issues. Since the chemicals are no longer required, gray water pollution is reduced and it is available for recycling. PermaFLOW™ Drain supports water conservation through efficient removal of stagnant debris with low flow rate faucets. This new 'Green by Design' improvement fixture provides a commonsense tool to reduce the time, effort and money needed for property maintenance and has a positive influence in the best practices of Green building.

“Many of our customers are interested in safe, and environment friendly products and PermaFLOW – Never Clog Drain is an excellent fit into our ‘GREEN’ products strategy”, said Tamara Dick, Director of Marketing, EVS+ Division for Medline.

PermaFLOW™ Drain is transparent for quick diagnosis of potential problems and also offers a smart emergency bypass option for water flow through the upper chamber, virtually eliminating any downtime. Further, accidentally dropped items (needles, jewelry, toys, coffee stirrs etc) can be easily seen and removed.

“We are very pleased to partner up with Medline and are confident that their sales network and relationships will help us penetrate this important market segment”, said Sanjay Ahuja, Vice President, PF WaterWorks.
