

Save Electricity, Save Money

# Energy Conservation

## All you need to begin saving energy and money

The average household spends more than \$1,500 a year on energy bills—nearly half of which goes to heating, cooling and refrigeration. Adjusting temperature settings and vent registers from room to room can increase comfort, reduce energy consumption, and lower the heating, cooling, and refrigeration costs. The U.S. Department of Energy estimates homeowners can save about \$180 a year by following temperature setting recommendations. You can save enough money with these energy savers to pay for the cost of this kit in no time.

- ✓ **ThermPLATE™ Swivel Switch Plate Thermometer**
- ✓ **RefriTHERM™ Swivel Refrigerator/Freezer Thermometer**
- ✓ **ThermPLATE™ Digital Switch Plate Thermometer**
- ✓ **PlugGUARD™ Energy Saving Plug Guard**
- ✓ **FilterMAGIX™ Air Filter Alarm Whistle**
- ✓ **LumiLIGHT™ Luminescent Night Light**
